

# Understanding Chip Customer Profiles and Shopping Patterns

Customer Segmentation

Purchase Behaviour Analysis

# Who are the chip customers and how do they shop?

## Key Findings

- Older singles/couples contribute the largest share of total sales at approximately 20.8%, making them the most valuable segment overall.
- Older families, despite relatively low shopping frequency, show the highest average units per customer, indicating strong purchase intensity per visit.
- Young singles/couples are frequent store visitors but record the lowest average units per visit, suggesting an opportunity to increase basket size within this group.

## Recommendations

- Encourage higher basket sizes among frequent visitors through cross-selling and bundle promotions, and evaluate their impact on chip purchases.
- Prioritize 160g–180g packet sizes as core inventory, given their highest purchase frequency.

Total Sales Share by Lifestage

Number of Customers by Lifestage

## INSIGHTS

- Customer life-stage rankings for visitation and sales are broadly aligned, with most segments staying within one position across both measures.
- Young singles/couples show relatively high visitation but contribute disproportionately less to sales, indicating an opportunity to test targeted incentives to increase spending.

## INSIGHTS

- Older singles/couples show similar sales across customer types . So, focus can be shifted to higher-variation segments. .
- Within the young singles/couples segment, mainstream customers account for the majority of sales, while budget and premium customers underperform. This suggests potential to increase overall spend through targeted incentives aimed at these lower-contributing subgroups.

Average Units per Customer by Lifestage

## INSIGHTS

- Older families buy the most chips per trip, even though they shop less often.
- High visit frequency, low basket size among young singles/couples.

## INSIGHT

Prioritize 130g–180g packet sizes as core inventory, given their highest purchase frequency.

## INSIGHTS

- Overall brand preferences remain largely consistent across life stages, with Kettle emerging as the leading brand followed by Smiths.
- Leverage Older Families' strong chip engagement by targeting them with bundle offers that combine Smiths, Woolworths, and RRD with complementary categories.

## INSIGHTS

Tyrrells has the highest affinity level among mainstream young singles/couples, meaning it is more strongly overrepresented in this segment compared to other customer groups. In addition, the 270g packet size also shows the highest affinity value.

**Target high-value customer segments**, particularly mainstream young singles/couples and older families.

**Optimize the product mix** to better align with customer preferences.

**Refine packet size strategy** to maximize appeal across key segments.

**Conduct further price sensitivity testing** within priority customer segments.
